

Network is a wood paneling system that allows you to create a stunning and unique installation. Available in a variety of modern designs and a rich palette of wood finishes in white oak and walnut.

## Product Usage Recommendations

- Suitable for residential and commercial vertical surfaces. Some designs are suitable for ceiling applications following specific installation guidelines.
- Tiles may be used in a kitchen or bathroom as long as they are not installed near or at a “splash” area. These tiles are finished with a conversion varnish (commonly used in kitchen cabinets) which can damage behind a splash area over time.
- Not recommended for use around a fireplace or heater as they are made with flammable materials.

## Installation and Maintenance Guidelines

- Installation instructions specific to design. See manufacturer’s detailed installation instructions.
- When installed, joints should be between 1/6” to 1/8” to act as an extra allowance for expansion of each tile. In cold temperatures, as the tiles contract, the joints may grow in size. We recommend the backing to be painted matt black to make the joints less noticeable.

## Collection

**Field:** All designs are 7 3/8” x 31 1/4” with varying thickness: structure-kubik, structure-sequence, baufort ocean, baufort river, baufort mountains, baufort meadows, offset curve
